Direct connection to the police for complete peace of mind

When someone is at genuine risk, response time is everything. The PMR Vigilant package is an integrated protection platform designed to deliver immediate, direct connection between high-risk individuals, protected premises and police control rooms.

Built on proven custodial-grade technology, Vigilant extends the capability of SafetyNet Assure personal alarms into a fully networked safeguarding and property protection system.

Built on 20 years of proven performance

Vigilant has been in operational use for more than twenty years. The latest Mk3 version builds on that strong track record, offering improved performance and greater flexibility to meet evolving safeguarding needs.

The Mk3 system is ESN-ready and supports both Airwave and 4G connectivity. This dual capability helps ensure continued reliability as emergency services transition to the new national network.

Vigilant now also supports wireless mesh-connected sensors. This means devices such as door contacts or motion detectors communicate securely with each other and the main system - without relying on standard Wi-Fi.

Importantly, these devices can be checked remotely in real time. Officers can confirm that equipment is active and functioning correctly, helping reduce maintenance visits and ensuring the system is always ready when needed.

These enhancements strengthen Vigilant's role as a dependable, future-ready safeguarding solution - built not just for immediate response, but for ongoing operational confidence.

SafetyNet Assure delivers the alert Vigilant delivers the response.

Protection that connects directly to police

At the heart of PMR Vigilant is its direct command-and-control integration.

When a SafetyNet Assure panic alarm is activated, the alert is transmitted straight into the designated police control room. There are no call centres, no third-party handling and no validation delays. The activation appears within existing operational systems, allowing officers to respond immediately.

The individual receives confirmation that police are on their way - providing critical reassurance during moments of acute distress.

Crucially, this direct-to-control-room architecture is what differentiates the Vigilant solution from other consumer or call-centre-based solutions.

Extended protection beyond the individual

PMR Vigilant goes beyond personal protection - it can transform a property into a secure, monitored environment through a network of integrated sensors, including:

- ⦿ Door and window magnetic contacts
- ⦿ Motion detectors
- ⦿ Door alarms
- ⦿ Smoke detection
- ⦿ Entry-point monitoring

All devices operate over the encrypted SafetyNet Mesh network - independent of consumer Wi-Fi or GPS - ensuring reliability in environments where traditional connectivity may fail.

Any activation, whether a panic alarm or a triggered sensor, is routed directly into the police control room infrastructure.

The result is a unified safeguarding solution that protects both people and premises.

Designed for high-risk environments

Vigilant supports a wide range of operational requirements, including:

- ⦿ Domestic violence safeguarding programmes
- ⦿ Witness protection
- ⦿ High-risk individuals under threat
- ⦿ Drug-related and organised crime premises
- ⦿ Evidence protection environments
- ⦿ Temporary or covert monitoring installations

Personal protection deployments are typically installed quickly by safeguarding officers, with straightforward user instruction.

Property-based deployments may be installed by technical support units for more complex or covert operational scenarios.

The system scales according to risk - from a single panic alarm to a fully networked multi-sensor installation.

Proven, secure, operationally integrated

PMR Vigilant is built upon the same encrypted infrastructure trusted in custodial and secure environments worldwide, including prisons and detention facilities.

Originally developed under Home Office specification as part of the Police Scientific Development Branch A7 replacement programme, the technology was selected from a competitive field of suppliers - reflecting its operational robustness and reliability.

Because Vigilant integrates directly into police command systems from the outset, it functions as an operational tool - not an external monitoring service.

Immediate. Discreet. Reliable.

PMR Vigilant goes beyond personal protection - it can transform a property into a secure, monitored environment through a network of integrated sensors, including:

- ⦿ Direct control room integration
- ⦿ No call centres
- ⦿ No reliance on consumer networks
- ⦿ Encrypted mesh communications
- ⦿ Scalable deployment

When an alarm is activated, police already know.

That certainty - both operational and psychological - is what delivers true reassurance.

PMR Products - trusted provider of SafetyNet solutions

PMR Products is a highly respected innovator in PMR systems and wireless applications, combining the merits of different technologies into integrated solutions tailored to the individual requirements of each application.
